

# The AROME model performance at high resolution

- Outline
  - Experiment design
  - Show results
  - Verification: Model vs. Observation
  - On going work

# Experiment design

- Study area: Gran Canarias (Lat~28°, Lon~-15°)
- Date: 2010/02/17
- Physics VS non physics experiments
- Orographic file: GTOPO30 ~ 1km

# Experiment design

Cycle:36h1 Version:04	Main feactures of setting model				
	Name EXP.	Resolution (km)	Host model (boundary interval)	Numerical time step (s)	NLON/NLAT
Physic	aic_25_36h14	2.5	lfs (3h)	60	576/576
	aic_10_36h14	1	Arome (1h) <sup>2</sup>	30	100/100
	aic_05_36h14	0.5	Arome (1h) <sup>2</sup>	10 <sup>3</sup>	200/200
No-physic <sup>1</sup>	aic_25_36h14nphy	25	lfs (3h)	60	576/576
	aic_10_36h14nphy	1	Arome (1h) <sup>2</sup>	30	100/100
	aic_05_36h14nphy	0.5	Arome (1h) <sup>2</sup>	10 <sup>3</sup>	200/200

- (1) Override the physics and diagnostics (flow and accumulation)
- (2) Nesting used: experiment aic\_25\_36h14 and in the case no-physic experiment aic\_25\_36h14nphy
- (3) Stability problems for step=15s; Semi-lagrange trajectory out of the atmosphere

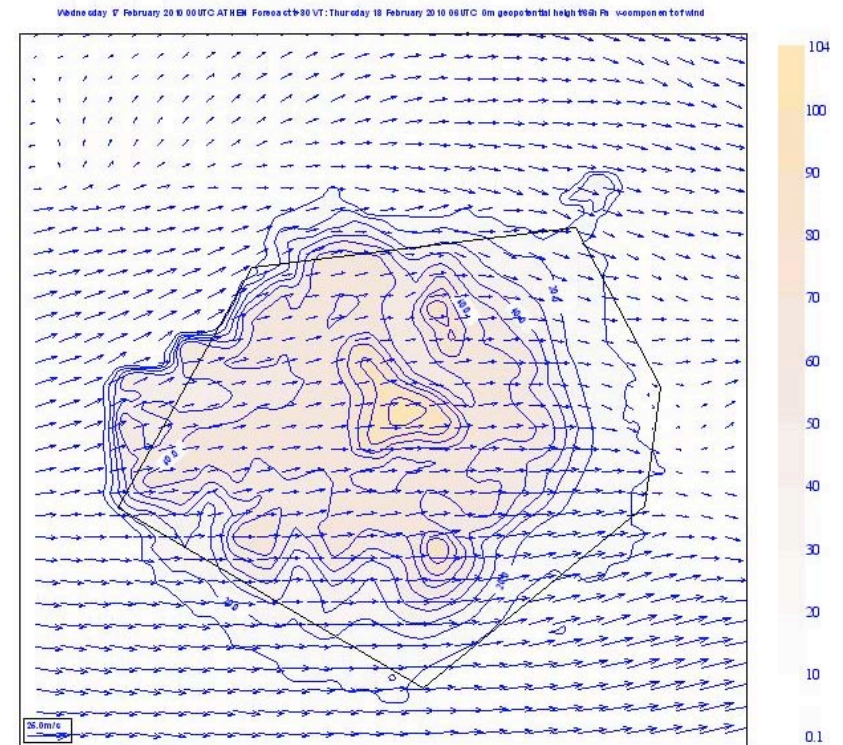

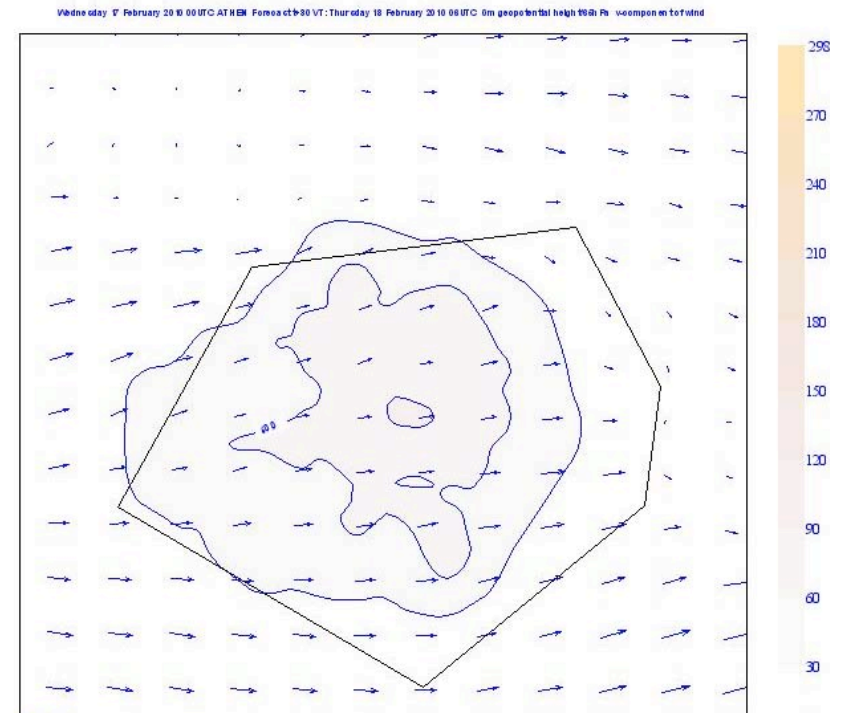

# Results

## WITH PHYSICS

Model level = 65

Param = wind

Forecast = t+30 h

# Results

## NON PHYSICS

Model level = 65

Param = wind

Forecast = t+30 h
